Enquête Nationale parmi les Collégiens et Lycéens sur les Abus de Substances et la Santé
Enquêtes HBSC / ESPAD 2018

Lyon, 24-26 October 2018
SURVEILLANCE SYSTEM REGARDING SUBSTANCE USE AMONGST TEENS

- The French Monitoring Centre for drugs and drug addiction (OFDT) is involved in several representative GPS which cover the whole population:

- In particular, three surveys focus on adolescence:
  - HBSC and ESPAD which concern students (aged 11, 13, 15, and 16 yr.)
  - ESCAPAD representative of French teenagers aged 17 including those who are no longer at school (whether they are employed or not)
THE ENCOUNTER
HBSC & ESPAD TWO INTERNATIONAL SCHOOL SURVEYS

- HBSC:
  The HBSC research network is an international alliance of researchers that collaborate on the cross-national survey of school students: Health Behaviour in School-aged Children (HBSC).
  
The HBSC collects data every four years on 11-, 13- and 15-year-old boys' and girls' health and well-being, social environments and health behaviours. These years mark a period of increased autonomy that can influence how their health and health-related behaviours develop.
  
  By 1983 the HBSC study was adopted by the WHO Regional Office for Europe as a collaborative study. HBSC now includes 48 countries and regions across Europe and North America.

- ESPAD:
  ESPAD is a collaborative effort of independent research teams in more than forty European countries and the largest cross-national research project on adolescent substance use in the world.
  
  The overall aim with the project is to repeatedly collect comparable data on substance use among 15-16 year old students in as many European countries as possible, now includes 35 European countries.
  
  The surveys are repeated every four years, with 1995 as the starting point.

Initially, the respective teams leading the two surveys were ignoring each other and even competing for funding and access to schools.

It is not easy in a country to conduct two surveys showing strong similarities. PIs have to face with:

- Funding difficulties (same public funders) and Convincing same government counterparts;
- Organizing the collection of several thousand questionnaires in almost identical terms only one year apart;
- Misunderstanding of partners (e.g. headmasters) about the obligation to carry out these “similar” surveys one year apart;
- Difficulty of ensuring the comparability (methodology and results);
- …

- Cannabis
  - 11 years: 1%
  - 13 years: 6%
  - 15 years: 28%
  - 16 years: 39%
  - 17 years: 42%

- HBSC
- ESPAD
- ESCAPAD
FROM 2006 HBSC & ESPAD BEGAN TO WORK VERY CLOSELY TOGETHER

- We have met systematically the partners together to explain the both projects;
- We matched the sample using the same rules;
- We worked very closely:
  - on the questionnaire, to share some items while following the international rules of each survey
  - the analysis of data
- ...
In 2010, we changed our ways of thinking!

- We decided to expand the sample to all French teens aged from 11 to 17 years enrolled in school
  - HBSC became representative of middle school/junior high-school students
  - ESPAD became representative of (senior) high school students

A new « tool » to reinforce prevention policy

- For stakeholders and school partners, this monitoring provides the opportunity to implement health promotion intervention in a more operational framework
Figure 1 - Tobacco, alcohol and cannabis use according to level of education among collège pupils in 2014 and lycée students in 2015 (%)
In 2018, the 2 surveys were done simultaneously in junior and senior high-schools

Under a new name: EnCLASS «National Survey in Secondary School and High School for Adolescents on Health and Substances »

Shared methods (one request at national level for the 2 samples, online questionnaires...)

Only one letter to prepare for the Minister and one communication towards schools, etc.
THE MARRIAGE CONTRACT

- Same calendar for data collection
- Shared burden of organisation
- New methods: online survey with different questionnaires by class
- Reduce of costs
- Field work done by a private society doing online surveys
- Better sampling:
  - for HBSC big enough to produce for the 13 regions of France (30 000)
  - for ESPAD over-sampling to have quality data on vocational schools (15 000)
ENCLASS 2018

- Sampling procedure: Stratified random without geographical limitation;
- Representative sample of students in junior and senior high-schools;
- Data collection in classroom;
- The project was submits to the National Council for Statistical Information;
We plan to run EnCLASS each 2 years

In 2020 we plan to survey specific vulnerable populations:

- Students in overseas territories
- Students in apprenticeship
- Students with cognitive disorders
- Students in prison
CONCLUSION: A SUCCESS?

- Web mode allow to collect a wide sample with limited costs: we collected data in more than 1,000 classes within a reasonable time and a fully standardized methodology;

- We are convinced that there is a real opportunity to improve the monitoring of health behavior and drug uses amongst adolescents by managing closely the both projects together;

- But we need a closer cooperation at international level;
